

Principal Engineering Ltd

Technical Training Services Capability

PSR and SSR Maintainer

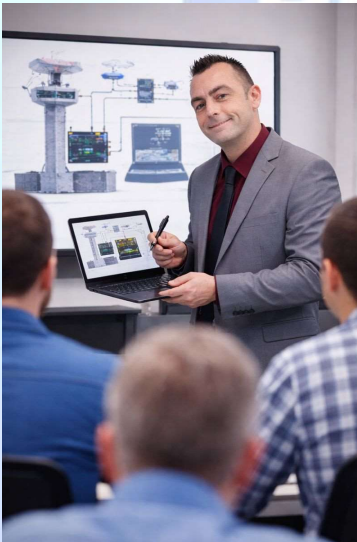

Theory and Practical Training

Principal Engineering Ltd provides specialist technical training services supporting the development and maintenance of competence within safety-critical surveillance engineering environments. Our training services are designed and delivered by experienced practitioners with extensive operational and engineering backgrounds.

We specialise in the design and delivery of PSR and SSR Maintainer Theory and Practical Training, supporting organisations in developing maintainers who are technically competent, safety-aware, and aligned with operational and regulatory expectations.

Training services include:

- Design and development of PSR and SSR maintainer training programmes
- Delivery of structured theory-based training
- Practical, hands-on training using operational or representative equipment
- Support to competency assessment and knowledge transfer

All training is tailored to the customer's operational environment, equipment types, and experience levels, ensuring relevance and effectiveness.

In addition to PSR and SSR maintainer training, all other forms of technical training can be considered upon request, subject to scope definition and suitability.

Principal Engineering Ltd delivers technically rigorous, practical training that supports safe operations, effective maintenance, and long-term capability development.
